OBJECTIVE

To secure a challenging software engineering position where I can apply my technical skills, passion for problem-solving, and strong foundation in programming to develop innovative software solutions. I aim to contribute to a dynamic team, continuously learn and grow in a collaborative environment, and make a meaningful impact in the field of software engineering.

EXPERIENCE

MY-WORK

As a 2nd-year software engineering student with 3 years of experience helping children in Java programming, I have developed a strong foundation in coding and teaching. During my tenure, I have dedicated my efforts to creating engaging exercises and practical projects that enhance students' understanding and problem-solving skills. In addition, I have gained experience in reviewing and assessing student assignments, providing constructive feedback to promote growth and improvement. Through this role, I ensure that students not only grasp the concepts but also apply them effectively in their assignments. By offering guidance and constructive criticism, I contribute to their learning journey and foster a positive and supportive environment. My passion for empowering the next generation of programmers drives me to continue making a positive impact in the lives of students as they develop essential skills and cultivate a passion for software engineering.
